

Women's Health

Building a foundation of good health involves the same steps for everyone:

- Visit a health care provider for checkups, preventive screenings, and vaccines
- Get active
- Eat healthy
- Pay attention to mental health, including getting enough sleep and managing stress
- Practice safe behaviors, such as quitting smoking, not texting while driving, and taking steps to protect yourself from sexually transmitted infections

But women face some unique challenges in maintaining health and wellness. This is especially true for those with underlying health conditions, such as hypertension, diabetes, obesity, and cardiovascular and respiratory conditions, as well as for older adults. The following resources can help women take a closer look at their overall health and well-being:

Heart Disease and Women

Heart disease is among the leading causes of death for women worldwide. Here are some tips for keeping your heart healthy and strong: [Healthy Heart Toolkit](#)

Breast Cancer
